## Systemmöbel

What do we expect from furniture?

A living space grows around people.  
Things are constantly being added. Useful  
and decorative. Important and  
unimportant. Beautiful and trivial.  
Everything gathers around us.

Wouldn't it be nice if some things could  
take a back seat so that others could get  
more attention? If there were a basis, a  
foundation on which we could build?

Our furniture is just that: the basis, the  
foundation for living space. Our furniture  
leaves space for people; it creates space  
for things.

Because our furniture always goes where  
something already is and it should not  
displace, but integrate. In order to exist as  
a basis, there should be many  
possibilities. Our furniture is flexible. It is  
ready to change - together with the living  
space it supports.

Our design is consistent. Consistent  
through the details in its design,  
consistent through its flexibility,  
consistent through its longevity and  
through its adaptability.

The word fashion is foreign to us. We  
speak of validity.

## System M

Our home, the office, the chambers, the agency, the library - spaces that surround us. They are familiar to us and they are connected to the people we share them with and the many things we fill them with.

Not everything is always perfect, but everything is part of it. A place that changes. We don't really need many things, but we keep them because we associate them with something. And some things we no longer notice because they are so familiar to us.

System M integrates itself into these spaces, even if each room is different. This is due to its functionality, its clear forms and the idea behind it.

Systems offer the advantage that you can individually put together combinations of elements that can be changed and added to. In this way, you put together exactly what you really need. And it always turns into something of its own.

The many variants make it possible to always plan the right configuration. And if necessary, we adapt System M, for example with a special colour.

## System M Shelf

System M shelving is a modular system of vertical wall profiles in various lengths that allow shelves, corpora, panels and tables to be hung in any order.

The grid widths are 80 and 120 cm. Suspension is by means of a shelf support that can be inserted into the profile from the front and placed in a 4 cm grid. The grid lies inside the profiles and is therefore almost invisible. Numerous elements are available for suspension to enable configuration according to individual requirements and in different depths.

The interior of the corpora can be fitted with various inserts for private use as well as for office use. All accessories can also be easily added at a later date.

In addition to the possibility of mounting the vertical wall profiles directly on the wall, the shelving can also be mounted in front of the wall supported on the floor. In this case, most of the loads are transferred to the floor.

Design: Thomas Merkel, 2011

## System components

### Material:

Steel powder-coated RAL fine structure

## System M Wallboard

The wall board is a single shelf for System M.

The shape is familiar, but the materiality is new: sheet steel bent from one piece. Elegant shape, high functionality, can be used both as a single piece and in combination with the System M Sideboard.

Design: Thomas Merkel, 2013

## System M Wallboard

Wallboard 80 / 120 x 24 cm

## System M Sideboard

The System M Sideboard is a modular system of corpora in different heights that can be hung invisibly next to each other on horizontal wall profiles or combined free-standing next to each other.

The grid widths are 80 and 120 cm. The units in heights from 0.5 to 2 file levels can be combined with each other as wall units and all units can be placed on feet or, up to a height of 1.5 file levels, on castors.

The units can be fitted out individually: open, with hinged doors or drawers. The interior can be fitted with a wide variety of inserts for private use as well as for office use.

All accessories can also be easily added at a later date. The sideboard can be rearranged or fundamentally changed: for example, hanging on the wall and then standing on the floor.

Design: Thomas Merkel, 2011

Hinged door 1 file level 80 / 120 cm  
Drawer 1 file level 80 / 120 cm  
Foot

## System M Sideboard wall-mounted

The System M Sideboard looks particularly elegant when mounted on the wall. The supporting profiles become almost invisible behind the hanging corpora, so that the sideboard seems to float.

When wall-mounted, the corpora in the heights 0.5 to 2 file levels can be combined with each other as desired.

The wall-mounted sideboard can also be placed on the floor with feet or castors if the furnishings change.

Design: Thomas Merkel, 2011

Horizontal wall profile  
Corpus open 1 file level 80 cm  
Hinged door 1 file level 80 cm  
Pair of drawers 0.5 file level 80 cm

## System M Sideboard free-standing

The System M Sideboard has a more classic, free-standing look and is versatile. The sideboard can be positioned freely in the room either on legs or, even more flexibly, on castors. Corpora in the heights 0.5 to 3 file levels can be placed on feet or, up to a height of 1.5 file levels, on castors.

To compensate for the use of drawers, securing brackets can be used to secure them to the wall or weighting plates can be used as counterweights. Rear panels are available for free positioning in the room.

The free-standing sideboard can be mounted on the wall with a profile if the furnishings change.

## Table M04

The tables by Thomas Merkel convince with visual and constructive lightness.

The material thicknesses are extremely reduced and the construction is completely embedded in the tabletop. The special feature is in the detail: adapters that serve to integrate the legs into the top also connect them visually.

Design: Thomas Merkel, 2004

## System components

## Lotus Table

The Lotus Table seems to be folded from one element. The legs merge with the top - and yet the legs can be removed for transport.

Due to its reduced design language, the Lotus Table can be combined with many different chairs and furnishings.

The Lotus Table is available in an indoor and an outdoor version. In the outdoor version, the table is made of stainless steel.

Design: Thomas Merkel, 2014

## Side Table M05 and M05 Edition

The M05 Side Tables with removable tray can be used in any living room thanks to their clear form.

The tables can be used classically in front of and next to the sofa, the armchair or freely in the room. Thanks to the different heights, they can be pushed together like set tables.

In addition to the standard colours, they are also available in many different special colours.

In the M05 Edition, the round side table of the series is available in three elegant material and colour combinations: Natural aluminium with an iron glimmer frame, copper with a rust-coloured frame and brass with a bronze grey frame.

Design: Thomas Merkel, 2009 / 2014

## Side Table Kaiser

The Side Table Kaiser is composed of two identical shapes, each folded from a single sheet of steel.

Simple form and thin material are used to create sculptural geometric side tables with a voluminous base and light tabletop.

The Kaiser is available in two versions: Kaiser large, slightly taller and narrower, and Kaiser small, slightly deeper and wider.

Design: Thomas Merkel, 2015

## Side Table Kanji

The design of the Side Table Kanji was inspired by the characters of the Japanese language. Just as the thickness of the strokes varies in calligraphy with a bamboo nib, Kanji changes when viewed spatially: its shape appears linear or two-dimensional depending on the angle of view.

Kanji is based on a complex manufacturing process, because the tables are each made of a single folded sheet metal strip whose ends only almost touch.

Kanji is available in an indoor and an outdoor version. In the outdoor version, the side table is made of stainless steel.

Design: Thomas Merkel, 2014

## Imprint

S+ Systemmöbel manufactures shelves, sideboards, tables and side tables that are characterised by a reduced design language and adaptability. They are well thought-out, unobtrusive and offer suitable variants for every situation in which they are used.

Please note that the products in the configurator may differ slightly from the images shown here.
