System furniture

We have been designing, developing and producing system furniture in Germany since 1995. These are characterised by a reduced design language, well thought-out details and durability. Furniture systems offer the advantage that they can be changed and supplemented by combining the various elements. In this way, every planning always turns into something unique. Numerous modules, variants and dimensions make planning easy. But if necessary, we customise System M, for example with a special colour. System M integrates itself into the home, the office, the firm, the agency and the library. This is due to its functionality, its clear forms and the idea behind it.

Thomas Merkel

Thomas Merkel has been working with system furniture for more than 25 years. The collection of S + Systemmöbel currently consists of ten designs of Thomas Merkel: in addition to shelves and corpora, also tables, side tables and benches are included.

„System M is based on experience with system furniture and combines two classic themes of furniture history: the shelf and the corpus furniture. In 1936, Charlotte Perriand had shown a metal shelf consisting of vertical wall profiles and shelves during the exhibition Living Room of Today and added it with her own wooden cabinets. Open shelves are an old theme which is constantly being reinterpreted. With today's technical possibilities, products can be produced differently. So the turn-around, the bending of sheet by 180°, is an element which is used for System M. It creates stability and allows narrow silhouettes which give a uniform language to the different elements. With System M all open and closed elements have been combined successfully.

I particularly appreciate the corpora because they form a separate system consisting of the same components, whether 1 or 3 file levels, whether open or closed, with a door or with a drawer. And open corpora are just as calm as outside. Nothing distracts the look unnecessarily.“
