Welcome home

Our home, the office, the chambers, the agency, the library - spaces that surround us. They are familiar to us and they are connected to the people we share them with and the many things we fill them with.

Not everything is always perfect, but everything is part of it. A place that changes. We don't really need many things, but we keep them because we associate them with something. And some things we no longer notice because they are so familiar to us.

System M integrates itself into these spaces, even if each room is different. This is due to its functionality, its clear forms and the idea behind it.

Systems offer the advantage that you can individually put together combinations of elements that can be changed and added to. In this way, you put together exactly what you really need. And it always turns into something of its own.

The many variants make it possible to always plan the right configuration. And if necessary, we adapt System M, for example with a special colour.

System M Shelf

System M shelving is a modular system of vertical wall profiles in various lengths that allow shelves, corpora, panels and tables to be hung in any order. The grid widths are 80 and 120 cm. Suspension is by means of a shelf support that can be inserted into the profile from the front and placed in a 4 cm grid. The grid lies inside the profiles and is therefore almost invisible. Numerous elements are available for suspension to enable configuration according to individual requirements and in different depths. The interior of the corpora can be fitted with various inserts for private use as well as for office use. All accessories can also be easily added at a later date. In addition to the possibility of mounting the vertical wall profiles directly on the wall, the shelving can also be mounted in front of the wall supported on the floor. In this case, most of the loads are transferred to the floor.

Design: Thomas Merkel, 2011

System components

Material:

Steel powder-coated RAL fine structure
Standard colours:
Traffic white RAL 9016
Traffic grey A RAL 7042
Traffic grey B RAL 7043
Traffic Black RAL 9017
Special colours according to RAL
Additional finish for corpora fronts:
Brushed oak, black lacquered

System M Sideboard wall-mounted

The System M Sideboard is a modular system of corpora in different heights that can be hung next to each other on horizontal wall profiles.

The System M Sideboard looks particularly elegant when mounted on the wall. The supporting profiles become almost invisible behind the hanging corpora, so that the sideboard seems to float.

The grid widths are 80 and 120 cm. When wall-mounted, the corpora in the heights 0.5 to 2 file levels can be combined with each other as desired.

The units can be fitted out individually: open, with hinged doors or drawers. The interior can be fitted with a wide variety of inserts for private use as well as for office use. All accessories can also be easily added at a later date.

The wall-mounted sideboard can also be placed on the floor with feet or castors if the furnishings change.

Design: Thomas Merkel, 2011

System M Sideboard free-standing

The System M Sideboard is a modular system of corpora in different heights that can be combined free-standing next to each other.

The System M Sideboard has a more classic, free-standing look and is versatile. The sideboard can be positioned freely in the room either on legs or, even more flexibly, on castors.

Corpora in the heights 0.5 to 3 file levels can be placed on feet or, up to a height of 1.5 file levels, on castors.

The grid widths are 80 and 120 cm. To compensate for the use of drawers, securing brackets can be used to secure them to the wall or weighting plates can be used as counterweights. Rear panels are available for free positioning in the room.

The units can be fitted out individually: open, with hinged doors or drawers. The interior can be fitted with a wide variety of inserts for private use as well as for office use. All accessories can also be easily added at a later date. The free-standing sideboard can be mounted on the wall with a profile if the furnishings change.

Insert with angled paper trays

The accessories for System M can be used for both System M Shelf and System M Sideboard.

System M Wallboard

The wall board is a single shelf for System M. The shape is familiar, but the materiality is new: sheet steel bent from one piece. Elegant shape, high functionality, can be used both as a single piece and in combination with the System M Sideboard.

System M Special-purpose solutions

Whether a special width is needed for a shelf in a niche or a special colour for a sideboard, System M can be adapted to special situations or wishes. Even modifications to existing elements are possible with System M on a project-by-project basis.

System M Configurator

Plan your System M yourself online on our website. Whether it's a bookcase for your home or a filing shelf or sideboard for the office: System M is easy to plan and calculate with the configurator. 4 standard colours or one of the 39 possible additional colours can be selected and a PDF shows the composition with dimensions, articles and prices.

Thomas Merkel

Thomas Merkel has been working with system furniture for more than 25 years. The collection of S + Systemmöbel currently consists of nine designs of Thomas Merkel: in addition to shelves and corpora, also tables and side tables are included.

„System M is based on experience with system furniture and combines two classic themes of furniture history: the shelf and the corpus furniture. In 1936, Charlotte Perriand had shown a metal shelf consisting of vertical wall profiles and shelves during the exhibition Living Room of Today and added it with her own wooden cabinets. Open shelves are an old theme which is constantly being reinterpreted. With today's technical possibilities, products can be produced differently. So the turn-around, the bending of sheet by 180°, is an element which is used for System M. It creates stability and allows narrow silhouettes which give a uniform language to the different elements. With System M all open and closed elements have been combined successfully.

I particularly appreciate the corpora because they form a separate system consisting of the same components, whether 1 or 3 file levels, whether open or closed, with a door or with a drawer. And open corpora are just as calm as outside. Nothing distracts the look unnecessarily.“

Imprint

S+ Systemmöbel manufactures shelves, sideboards, tables and side tables that are characterised by a reduced design language and adaptability. They are well thought-out, unobtrusive and offer suitable variants for every situation in which they are used.
