

Press release for Nitō

The construction for a piece of furniture was created from a typical connecting element for aluminium.

Nitō is simple, light, stands freely in the room and comes home fully assembled. Like a bridge, it is firmly riveted and functionally complemented by various accessories.

A small component is the backbone and heart of Nitō: a blind rivet nut that holds the individual elements together and at the same time serves as the basis for additions and connections, as elements can be screwed to it.

As an open shelf or with drawers and sliding doors. In the kitchen, bathroom or garden. In the hallway, children's room, living room, office or studio. Nitō creates space and brings order.

Nitō is made of aluminium and is therefore still very light, even as a large shelf. This has many advantages, not only for transport. The construction is stable even without a clamping cross and its surface is robust because it is powder-coated. Nitō comes in 7 standard colours and over 100 other RAL colours are possible.
